VPMini Pole Camera System

The VPMini Pole Camera System is a complete, multi camera HD video surveillance system in a rugged housing that easily mounts on a utility pole or building. The systems comes with standard with the following components:

- 2x Axis 4MP Fixed Wide Angle Cameras with built in IR Illumination have a combined view of 260 degrees
- 1x Axis 1080p PTZ (Pan, Tilt, Zoom) Camera with 10X Optical Zoom
- Advanced 4G LTE Cellular Data Modem for live monitoring and remote camera control
- Onboard PC with 1TB Hard Drive running Axis Camera Station for 24/7 recording and fast retrieval of key video
- Live and recorded video can be accessed from a remote PC or with a mobile device with the Axis Camera Station App (supports both ios and android)

With the included combination of cameras, a continuous overview of the area is provided.

The two fixed cameras include built in Infrared Illumination that will provide 150-200' of illumination of the area. IR Light is invisible to the naked eye, so even though the cameras see perfectly, the area appears unlit. The PTZ Camera provides the ability to zoom in optically on movement detected by the fixed cameras. This combination provides the best possible image quality while still providing continuous visibility of the overall area.

The VPMini only requires 110VAC power to operate. The unit can also be powder coated to match your environment.

The VPMini provides a cost effective, quickly deployable surveillance solution in a small discrete package.
